
CloudCIX Rest API Client

Release 0.3.1

November 21, 2016

1	Overview	1
1.1	Installation	1
1.2	Documentation	1
1.3	Development	1
2	Installation	3
3	Python Application	5
4	Django Application	7
5	Usage	9
6	Reference	11
6.1	cloudcix	11
7	Contributing	13
7.1	Bug reports	13
7.2	Documentation improvements	13
7.3	Feature requests and feedback	13
7.4	Development	13
8	Authors	15
9	Changelog	17
9.1	0.3.2 (2016-11-18)	17
9.2	0.3.1 (2016-11-08)	17
9.3	0.3.0 (2016-11-04)	17
10	Indices and tables	19
	Python Module Index	21

Overview

docs	
tests	
package	

python-cloudcix is CloudCIX's Python REST API client for rapidly building secure, scalable CloudCIX applications. For more information about CloudCIX visit http://www.cix.ie/services/cloudcix_saas/

1.1 Installation

```
pip install cloudcix
```

1.2 Documentation

<https://python-cloudcix.readthedocs.io/>

1.3 Development

To run the all tests run:

```
tox
```

Note, to combine the coverage data from all the tox environments run:

Windows	set PYTEST_ADDOPTS=--cov-append tox
Other	PYTEST_ADDOPTS=--cov-append tox

Installation

At the command line:

```
pip install cloudcix
```

Python Application

Create a settings module:

```
# settings.py
CLOUDCIX_AUTH_URL = 'https://keystone.cloudcix.com/v3'
CLOUDCIX_API_URL = 'https://api.cloudcix.com/'
CLOUDCIX_API_USERNAME = 'username'
CLOUDCIX_API_PASSWORD = 'yourpassword'
CLOUDCIX_API_ID_MEMBER = 'your_member_id'
```

you can find your member ID at <https://saas.cloudcix.com/membership/setup/account/member/>

and configure the Python environment:

```
# app.py

import os
os.environ['CLOUDCIX_SETTINGS_MODULE'] = 'settings'
```

Django Application

Add the same settings from the previous section in your Django settings module. `python-cloudcix` will import the settings using Django.

Usage

To use CloudCIX Rest API Client in a project:

```
from cloudcix import api
```

Reference

6.1 cloudcix

Contributing

Contributions are welcome, and they are greatly appreciated! Every little bit helps, and credit will always be given.

7.1 Bug reports

When [reporting a bug](#) please include:

- Your operating system name and version.
- Any details about your local setup that might be helpful in troubleshooting.
- Detailed steps to reproduce the bug.

7.2 Documentation improvements

CloudCIX Rest API Client could always use more documentation, whether as part of the official CloudCIX Rest API Client docs, in docstrings, or even on the web in blog posts, articles, and such.

7.3 Feature requests and feedback

The best way to send feedback is to file an issue at <https://github.com/cloudcix/python-cloudcix/issues>.

If you are proposing a feature:

- Explain in detail how it would work.
- Keep the scope as narrow as possible, to make it easier to implement.
- Remember that this is a volunteer-driven project, and that code contributions are welcome :)

7.4 Development

To set up *python-cloudcix* for local development:

1. Fork [python-cloudcix](#) (look for the “Fork” button).
2. Clone your fork locally:

```
git clone git@github.com:your_name_here/python-cloudcix.git
```

3. Create a branch for local development:

```
git checkout -b name-of-your-bugfix-or-feature
```

Now you can make your changes locally.

4. When you're done making changes, run all the checks, doc builder and spell checker with `tox` one command:

```
tox
```

5. Commit your changes and push your branch to GitHub:

```
git add .
git commit -m "Your detailed description of your changes."
git push origin name-of-your-bugfix-or-feature
```

6. Submit a pull request through the GitHub website.

7.4.1 Pull Request Guidelines

If you need some code review or feedback while you're developing the code just make the pull request.

For merging, you should:

1. Include passing tests (run `tox`)¹.
2. Update documentation when there's new API, functionality etc.
3. Add a note to `CHANGELOG.rst` about the changes.
4. Add yourself to `AUTHORS.rst`.

7.4.2 Uploading to PyPI

```
rm -rf *.egg-info rm -rf build/ python setup.py sdist bdist_wheel upload
```

7.4.3 Tips

To run a subset of tests:

```
tox -e envname -- py.test -k test_myfeature
```

To run all the test environments in *parallel* (you need to `pip install detox`):

```
detox
```

¹ If you don't have all the necessary python versions available locally you can rely on Travis - it will run the tests for each change you add in the pull request.
It will be slower though ...

Authors

- Martin Picard <map@cix.ie>
- Brian Barba Hernandez <bh@cix.ie>

Changelog

9.1 0.3.2 (2016-11-18)

- Added Nmap service
- Added some docstrings for api
- Added NotImplemented to currently unused Active Directory authentication

9.2 0.3.1 (2016-11-08)

- Removed Antenna client deprecated at the end of October
- Added missing Circuit clients
- Added missing domain, pool_ip and ipmi clients to dns
- Added missing clients for circuit and plot
- Added new bin and bin_sku clients to scm

9.3 0.3.0 (2016-11-04)

- Major rewrite of code to be thin wrapper for requests
- Removed python-keystoneclient dependency
- Removed oslo.config dependency
- Removed django dependency (still an optional integration)
- Added 100% coverage unit tests using pytest
- Added readthedocs online documentation
- Added Travis CI continuous integration testing
- Added Coveralls CI coverage report integration
- Added Codecov CI code quality report integration
- Improved README

Indices and tables

- `genindex`
- `modindex`
- `search`
